

Figure 10 is a line graph titled "Number of on-chip tracks alive". The x-axis is labeled "Time [s]" and ranges from 0 to 150 with major ticks every 15 units. The y-axis is labeled "Average number of tracks" and ranges from 0 to 25 with major ticks every 5 units. There are three data series represented by dashed lines: a red line (Set 1), a green line (Set 2), and a blue line (Set 3). The red line starts at 0, rises sharply to about 20 by 15 seconds, and then fluctuates between 20 and 24 for the remainder of the time. The green line starts at 0, rises to about 14 by 15 seconds, and then fluctuates between 10 and 15. The blue line starts at 0, rises to about 7 by 15 seconds, and then fluctuates between 5 and 9.
